

PARETI VENTILATE

Il sistema a facciata ventilata offre una soluzione di rivestimento per esterno volta al miglioramento delle prestazioni dell'edificio. Questa tecnologia risolve le problematiche causate dall'umidità e dagli agenti atmosferici, migliora le prestazioni di isolamento termico e acustico degli edifici, potenzia le prestazioni dei sistemi di isolamento esterni tradizionali (sistemi a cappotto) e riduce il processo di degrado del paramento esterno. Inoltre i rivestimenti verticali Newtechwood eliminano i ponti termici, rendendo omogenea la protezione termica della facciata e migliorando le prestazioni energetiche dell'edificio. L'aria che entra nell'intercapedine dal basso verso l'alto crea un efficace flusso aerato che sviluppa le funzioni di traspirazione della facciata ed eliminazione dell'umidità.

Ventilated Façades

The ventilated-wall system offers an external covering solution geared towards enhancing the building's performance. This technology resolves issues caused by humidity and atmospheric agents, improving the building's heat insulation and soundproofing while boosting the performance of traditional exterior wall insulation systems and slowing the process of deterioration affecting the exterior leaf. Moreover, Newtechwood vertical coverings eliminate thermal bridges, making the heat protection of the facade consistent and bolstering the energy efficiency of the building. The air that enters the cavity from below and rises up creates an effective air flow that helps the wall to breathe and eliminates humidity.

NEWTECHWOOD OUTDOOR

applicazioni

cladding

Newtechwood investe quotidianamente nella ricerca e nello sviluppo di nuove tecnologie applicate al rivestimento verticale degli edifici, ponendo particolare attenzione alle pareti ventilate e ai frangisole, elementi che conferiscono forte personalità agli edifici. I rivestimenti verticali possono essere realizzati con i medesimi sistemi utilizzati a pavimento.

Le collezioni di legni compositi UltraShield e Newtechwood e di legni naturali si compongono di profili tecnologicamente avanzati, caratterizzati dall'ampia scelta di colori, finiture e geometrie per poter offrire al progettista la soluzione adatta a qualsiasi esigenza architettonica.

Newtechwood invests every day in the research and development of new technologies applied to cladding, focusing on ventilated walls and louvers – elements that imbue buildings with a real sense of character. Cladding can be made utilising the same systems used for flooring solutions.

The UltraShield composite wood and Newtechwood natural wood collections are composed of technologically advanced profiles, featuring an extensive choice of colours, finishes and geometries, with a view to offering designers the ideal solution for any set of architectural requirements.

AT ITS VERY BEST

UNPARALLELED BEAUTY

Naturale decking is available in premium tropical colors with deep wood-grain pattern to create a premium angles look that leaves other composites in dust.

HIGH PERFORMANCE

Engineered with unrivaled fade, stain, scratch and mold resistance. **Naturale** decking and cladding maintains its vibrant color and luxurious finish-come scorching sun or red-wine spill-thanks to its unyielding, three-side Ultra Shield protection.

HASSLE FREE

No sanding. No staining. No painting. No kidding. (Not to mention simple soap-and-water cleaning.)

A GREEN DECK

Made from 95% recycled board that makes you feel about the great outdoors.
